Executive Business Insight Report

Management-focused interpretation of sales, profitability and discounting patterns across 100,000 order-level records.

Executive Summary

- Scale: ₹250.84 Cr in total sales across 100,000 orders, generating ₹37.55 Cr in total profit.
- Profitability: Overall profit margin is 14.97%, with ₹63.04 Cr of discount amount and an average discount of 25.13%.
- Business pattern: Regional and category performance is relatively balanced; the stronger management opportunity is therefore profitability discipline rather than regional reallocation.

Key Finding

DISCOUNTING IS ASSOCIATED WITH LOWER PROFIT MARGINS

0% discount: 19.83% margin → 50% discount: 10.08% margin → -9.75 percentage points

Higher discount levels are associated with lower profit margins, making discount governance an important profitability lever. This is an observed association, not a causal estimate.

Business Opportunities

Tables	14.82% margin	Lower-margin sub-category requiring review of pricing, sourcing and promotional strategy.
Washing Machines	25.37% avg. discount	High discounting combined with lower-margin performance warrants tighter promotional review.
Tomatoes	25.70% avg. discount	Highest average discount among the reviewed sub-categories; monitor discount intensity.
Microwaves	15.22% margin	Stronger-margin benchmark that should be protected from unnecessary discounting.

Management Actions

- 1. Strengthen discount governance. Tighten discount thresholds and promotional controls where higher discounting coincides with weaker margins.
- 2. Prioritize low-margin review. Investigate pricing, sourcing and promotion decisions for lower-margin areas, particularly Tables and Washing Machines.
- 3. Protect stronger-margin products. Avoid unnecessary discounting on stronger performers and use them as profitability benchmarks.

Analytical Note

The analysis uses 100,000 order-level records. Discount-margin patterns are interpreted as association rather than causation. Regional and category performance is relatively balanced, so recommendations focus on profitability and discount management. The 19.83% margin at 0% discount is retained from the established dashboard/project analysis.
